Cookies and browser storage policy

HU-P11 · v6.5 · 12.10.2026

1 Scope and controller

1.1. This Policy explains cookies, local browser storage and similar technologies used for homeunity.io and the Homeunity account. The responsible operator is Fuchs Treuhand AG, UID CHE-107.253.643, Morgartenstrasse 3, 6003 Luzern, Switzerland. Questions may be sent to privacy@homeunity.io. The Privacy Notice (HU-P10) explains the broader processing of personal data.

1.2. Cookies are small values exchanged with a website. Local storage keeps values in the browser until deleted or replaced; session storage normally lasts for the relevant browser session. These mechanisms are different from server-side contract, payment and transaction records.

2 Necessary functions and the recorded choice

2.1. Necessary technologies support a function the visitor requests, such as maintaining an authenticated session, protecting a form or remembering a privacy choice. Their use is limited to that function; a description as “necessary” does not authorise unrelated advertising.

2.2. The public site's consent component uses the local-storage key hu-consent to remember the selected choice and avoid repeatedly showing the same notice. This entry has no automatic expiry in the component: it remains until changed, replaced or removed through browser controls. It records the choice made in this browser; it does not by itself activate an analytics or advertising service.

2.3. Account sign-in and any embedded service may use their own session technologies when the visitor selects that function. The relevant service information identifies additional technologies and their duration before they are used where disclosure or consent is required. A list for the public website must not be treated as a complete list for an independently operated external sign-in or payment page.

3 Optional technologies

3.1. Analytics used beyond necessary operation, advertising identifiers and cross-site tracking are optional functions. Where consent is required, they may be activated only after a separate affirmative choice based on information about their purpose, provider or recipient category, storage and duration. Agreeing to membership or merely continuing to browse is not that consent.

3.2. Rejecting optional technologies does not by itself prevent purchasing membership or exercising existing contractual rights. If a visitor requests an external feature that cannot operate without a particular technology, the interface explains that dependency before the feature is loaded. The Company does not treat a recorded “accept” value as permission for undisclosed future purposes.

4 Changing a choice and removing local data

4.1. Use the available privacy-choice control or contact privacy@homeunity.io to change or withdraw an optional consent. Browser settings also allow site cookies and local storage to be inspected, blocked or deleted. Deleting hu-consent makes the site's component request a choice again on a subsequent visit. Blocking session storage or necessary cookies may sign you out or prevent a requested function from working.

4.2. Removing data from one browser does not remove it from another device, erase server-side transaction records or delete a public blockchain transaction. A request concerning personal data held by the Company is handled under HU-P10. Withdrawal of consent affects subsequent consent-based processing and does not invalidate lawful earlier processing.

5 Updates and enquiries

5.1. The Company supplies updated information when technologies or purposes materially change and obtains a new consent where required. The applicable choice is recorded independently of the version of the membership agreement. Contact the Company if a consent control does not work or if a technology appears inconsistent with the information provided; the issue is investigated without requiring the visitor to accept optional tracking.
